Discover our thematic Work Packages

With I-CARE4OLD, we aim to develop a next-generation decision support tool for healthcare professionals taking care of older persons with complex chronic conditions.

In order to reach our ambitious goal, we divided our project into different work packages, each of these focusing on a specific aspect allowing an in-depth study of a specific theme. At the same time, the multidisciplinary approach within our project also implies a close collaboration between the different working groups of the project. Check out our website for a description of the different work packages.

Participate in our survey!

As part of the I-CARE 4OLD research, we are investigating the main current problems in ineffective and unsafe use of medicines in older adults and aim to clarify main drug-related risk factors that significantly modify health trajectories of older persons. To this end, we developed a survey for healthcare professionals caring for older people with frailty.

Are you a physician, nurse, pharmacist, or other dedicated professional?

Help us investigate!

New: The I-CARE4OLD Leaflet

To present our project at upcoming congresses and events, we developed a leaflet with the project info in a nutshell. Discover the I-CARE4OLD project leaflet on our website.
